Why Career Education?

Career education is not just about gaining practical skills and securing a job. It's also about setting the foundation for a rewarding and secure future... *for yourself, for your family, and for your community.*

With more than 1,000,000 new "middle skills" jobs projected to surface by 2025, there has *never been a better time* to secure a future-ready career education.

By 2020, 65% of all jobs will require education beyond high school. Is a high-paying, cutting-edge career in advanced manufacturing in *your* future?

Are you ready to find out?

Real-World Ready

In contrast to the "smokestack" manufacturing of yesterday, the advanced manufacturing sector of today combines cutting-edge technology with state-of-the-art processes. With an estimated 34,590 new job opportunities each year in California, and only about

5,868 graduates to fill them, Advanced Manufacturing is a great choice for those who like to work with their hands and their heads.

As this sector continues to evolve and adopt new technologies, the demand for workers who possess these advanced, high-tech skills continues grow, especially in the areas of 3-D printing and high-speed, computerized numerical control machining.
